

OMNIWASH PASSTHROUGH DISHWASHERS

MODEL MODEL 61P

a version with
nr.1 x 1HP wash pump
90/180 second washing cycle
40 racks per hour performance

MODEL 62 P/S

a version with
nr.2 x 1HP wash pumps
60-120 second washing cycle
60 racks per hour performance

One wash pump serves the top wash arm, and one serves the bottom. The top pump starts first - it pins down light items on to the washing basket, and the bottom pump starts a few seconds later. This prevents light items from being overturned during the wash cycle.

The advantages are :

- 2 HP of wash pressure for very soiled items, also good for some utensil items.
- If 1 pump is down, the kitchen can still effect some washing, until repair is made

PASSTHROUGH DISHWASHERS
